

MCPs configuration in Github Copilot and Claude Code

1. Installation of Github Copilot CLI / Github Copilot for Eclipse Add On / Claude Code
2. Installation of MCP
3. Configuration of MCP in Github Copilot
4. Demo

1. Installation of Github Copilot CLI / Github Copilot for Eclipse / Claude Code

- Github Copilot CLI

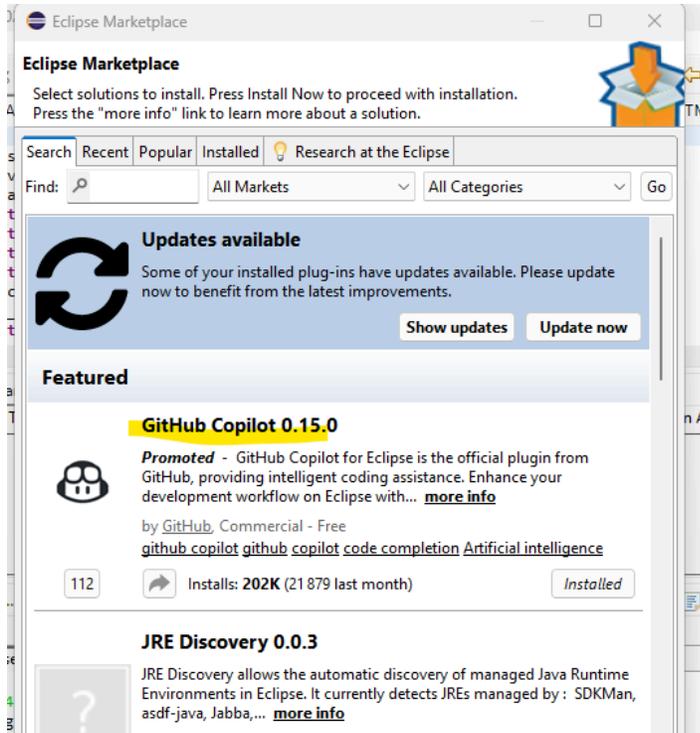

Launch Terminal in Eclipse or in your preferred IDE (even in BAS) and launch command `npm install -g @github/copilot` :

The image shows a screenshot of a terminal window within an IDE. The terminal title bar reads 'MINGW64/c:/Users/20017264'. The prompt is '20017264@L890114 MINGW64 ~'. The command 'npm install -g @github/copilot' has been entered and is highlighted in yellow. The terminal output is currently empty.

- Github Copilot for Eclipse Add On

In the Eclipse MarketPlace, search for Github Copilot AddOn, and download it :

- Claude Code

Launch Terminal in Eclipse or in your preferred IDE (even in BAS) and launch command : `curl -fsSL https://claude.ai/install.sh | bash`

Note : Deprecated command `npm install -g @anthropic-ai/claude-code` also works

Get Started with SAP Business Application Studio

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL

```
user: ~ $ curl -fsSL https://claude.ai/install.sh | bash
Setting up Claude Code...
```

```
✓ Claude Code successfully installed!
```

```
Version: 2.1.52
```

```
Location: ~/.local/bin/claude
```

```
Next: Run claude --help to get started
```

```
✓ Installation complete!
```

```
user: ~ $
```

3. Installation of MCP

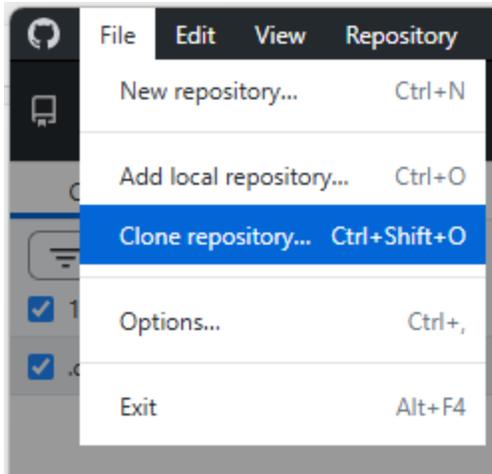

We will use 3 MCP :

[mcp-sap-docs](#) & [abap-mcp-server](#) : From [Marian Zeis](#)
[vibing-steampunk](#) : From [Alice Vinogradova](#)

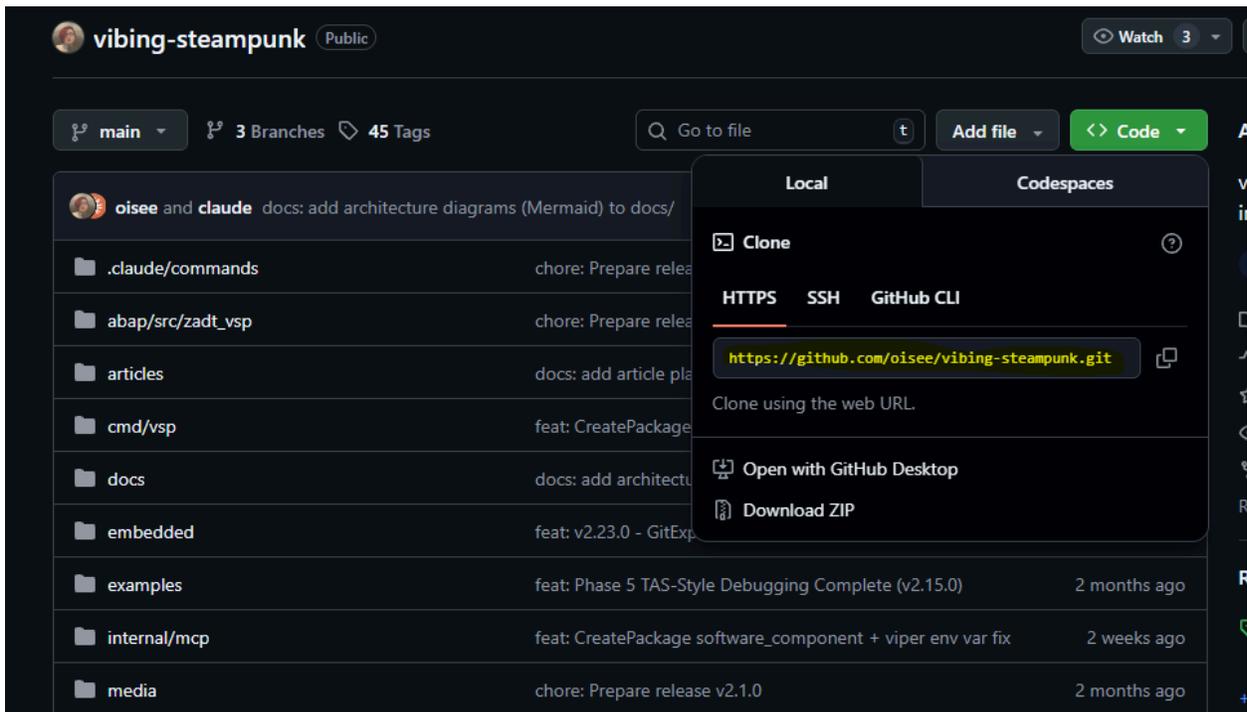

For [mcp-sap-docs](#) & [abap-mcp-server](#) no installation needed (we will configure this MCPs later in the documentation)

[Vibing-steampunk](#) :

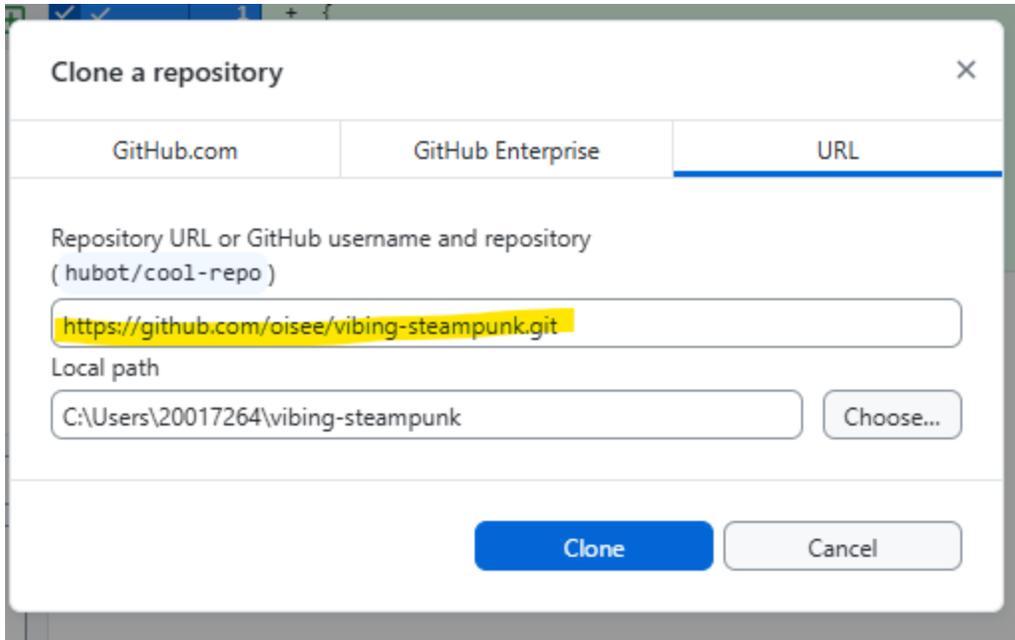

- Install Git Desktop : <https://desktop.github.com/download/>
- Then go to file -> Clone repository :

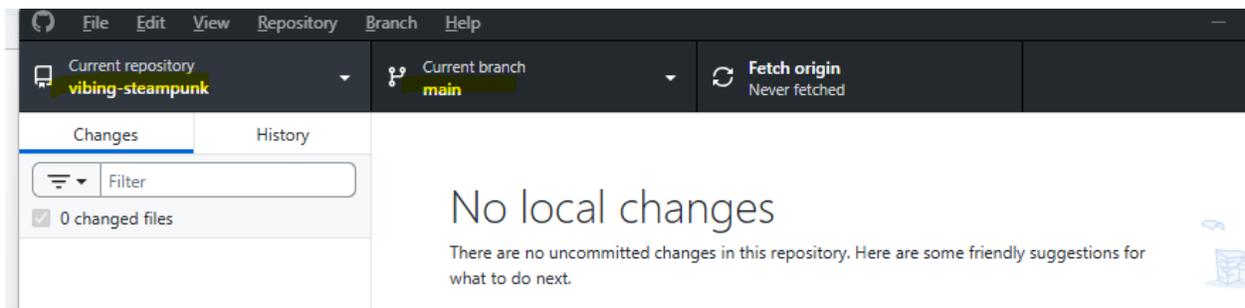

- Copy the URL

- And use it in the configuration & Also choose Local path to store the MCP
BE CAREFUL : The path will be used for the config of the agent later

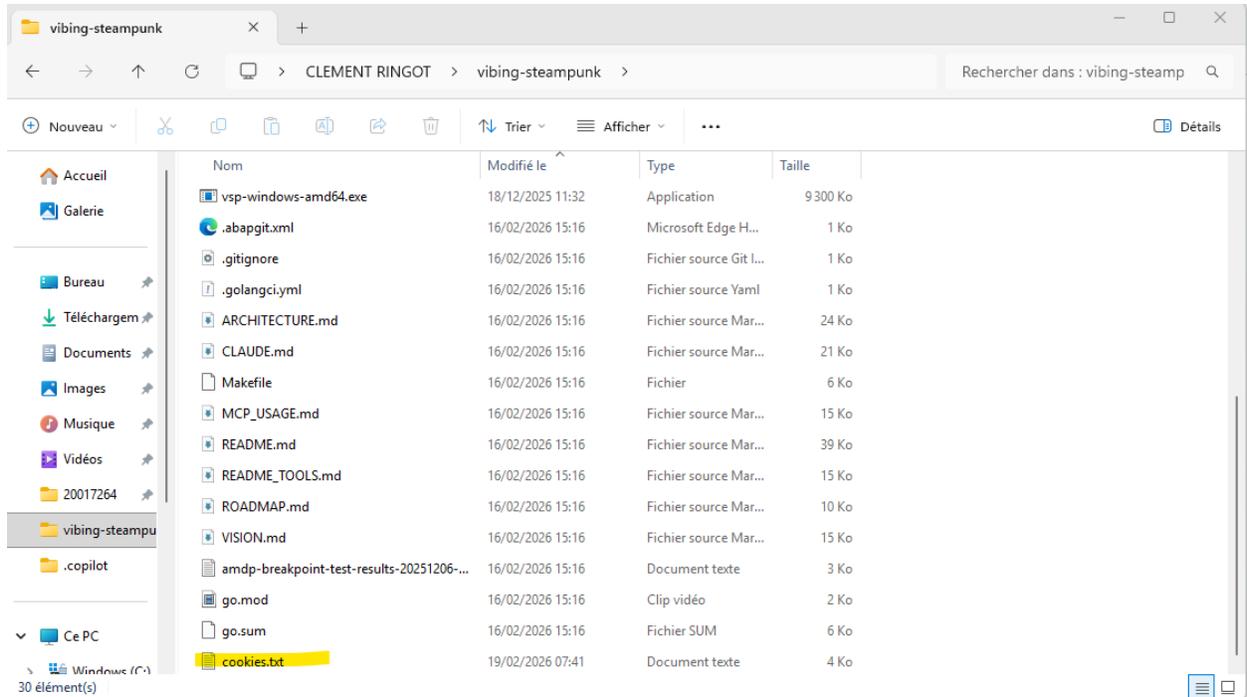

- Then clone it and you should see the main branch correctly pulled in your laptop

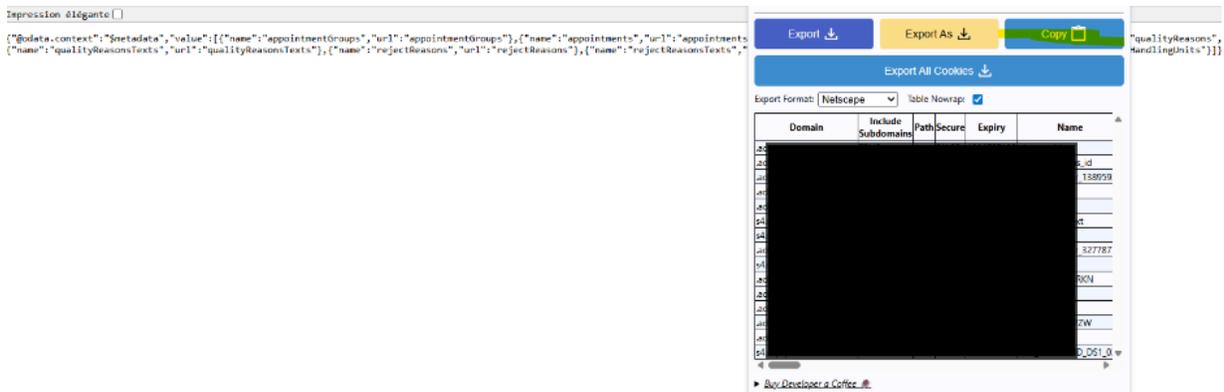

- Once the MCPs is installed - Go to Google Chrome and install extension <https://chromewebstore.google.com/detail/get-cookies.txt-locally/cclclndahbckbenkjhflpdbgdldlbecc>

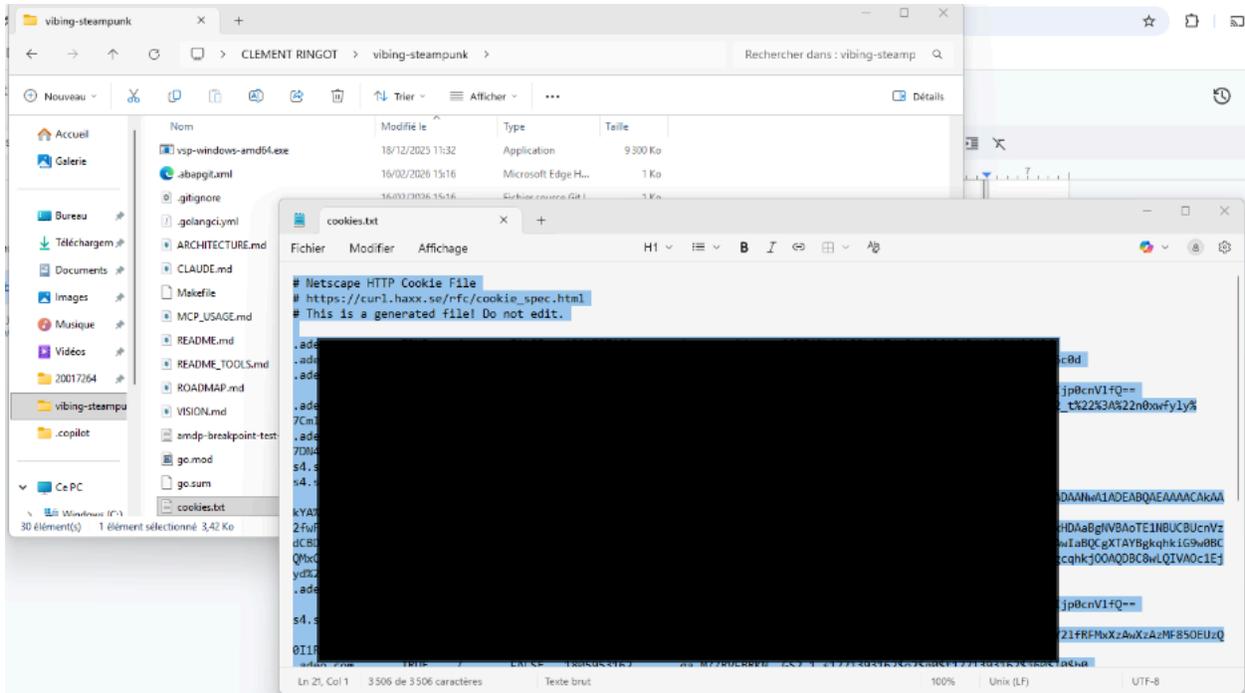

This extension is a prerequisite for downloading cookies of your SAP System using SSO.

- Then create a file cookies.txt in your repository :

- Then on google chrome connect to your system using URL to your system
- Once your connected, copy/paste cookies in the new files you just created

- And save it

4. Configuration of MCPs

- In Github Copilot CLI :

Open file { home_path }/.copilot/mcp-config.json

And add following MCP :

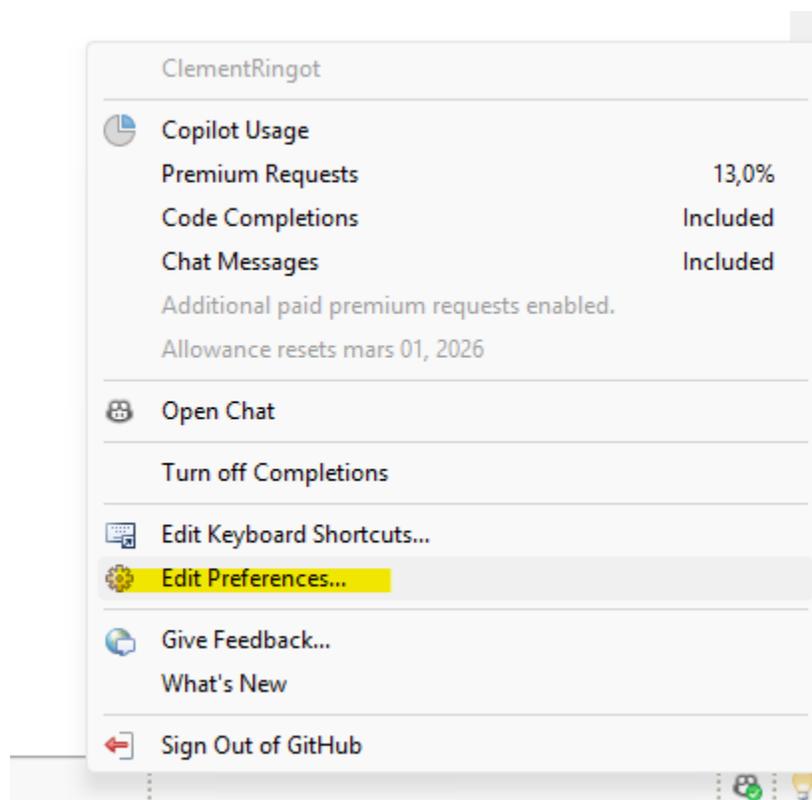

```
{
  "mcpServers": {
    "vibing-steampunk": {
      "type": "stdio",
      "command": "{your_repo_path}\\vsp-windows-amd64.exe",
      "args": [],
      "env": {
        "SAP_URL": "{your_url_system}",
        "SAP_CLIENT": "{your_url_client}",
        "SAP_COOKIE_FILE": "{your_repo_path}\\cookies.txt"
      }
    },
    "abap-mcp-server": {
      "type": "http",
```

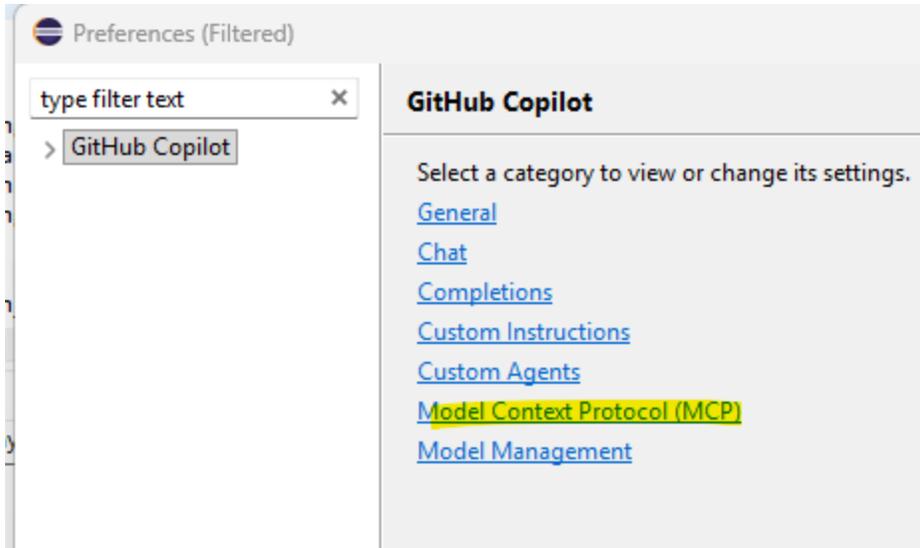

```
"url": "https://mcp-abap.marianzeis.de/mcp"
},
"sap-docs": {
  "type": "http",
  "url": "https://mcp-sap-docs.marianzeis.de/mcp"
}
}
}
```

More info here : <https://docs.github.com/en/copilot/how-tos/copilot-cli/use-copilot-cli>

- In Github Copilot for Eclipse Add On

Go to the settings

And add the list of MCP

```
{
  "servers": {
    "vibing-steampunk": {
      "type": "stdio",
      "command": "{your_repo_path}\\vsp-windows-amd64.exe",
      "env": {
        "SAP_URL": "{your_url_system}",
        "SAP_CLIENT": "{your_url_client}",
        "SAP_COOKIE_FILE": "{your_repo_path}\\cookies.txt"
      }
    },
    "abap-mcp-server": {
      "type": "http",
      "url": "https://mcp-abap.marianzeis.de/mcp"
    },
    "sap-docs": {
      "type": "http",
      "url": "https://mcp-sap-docs.marianzeis.de/mcp"
    }
  }
}
```

- In Claude Code :
Open file { home_path }/.claude.json

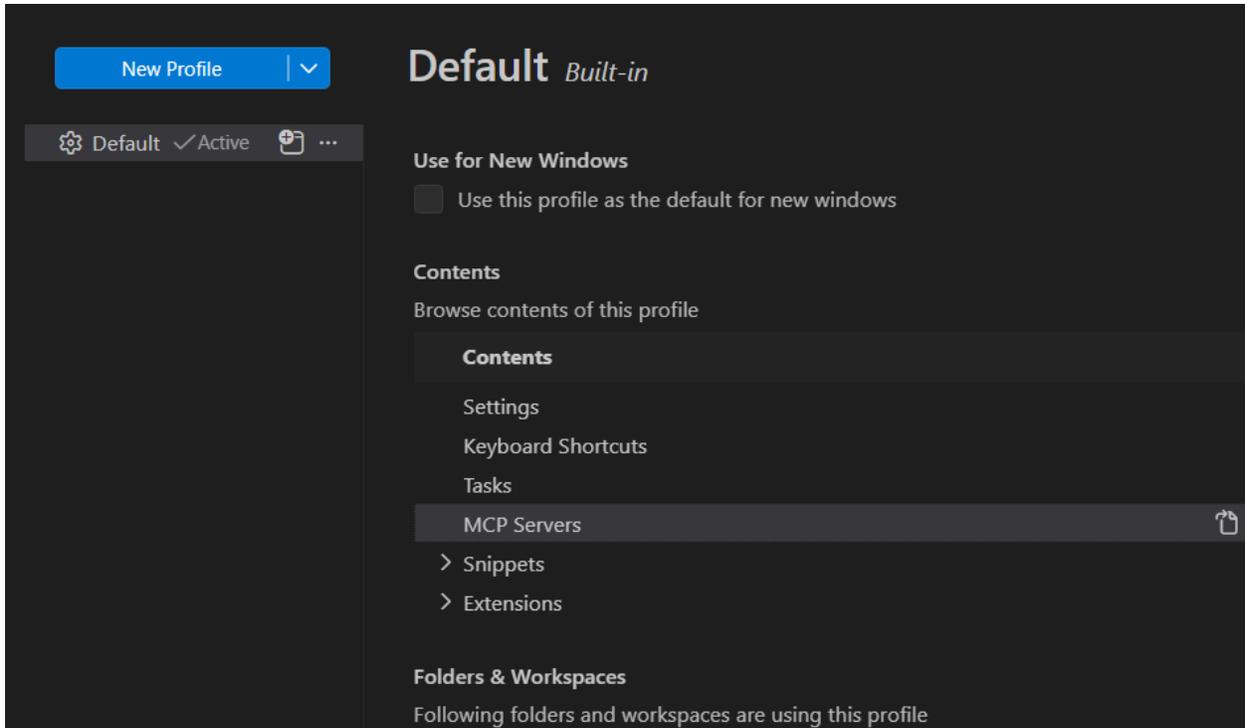

And add following config :

```
"mcpServers": {
  "vibing-steampunk": {
    "type": "stdio",
    "command": "{your_repo_path}\\vsp-windows-amd64.exe",
    "env": {
      "SAP_URL": "{your_url_system}",
      "SAP_CLIENT": "{your_url_client}",
      "SAP_COOKIE_FILE": "{your_repo_path}\\cookies.txt"
    }
  },
  "abap-mcp-server": {
    "type": "http",
    "url": "https://mcp-abap.marianzeis.de/mcp"
  },
  "sap-docs": {
    "type": "http",
    "url": "https://mcp-sap-docs.marianzeis.de/mcp"
  }
},
```

Find more info here : <https://code.claude.com/docs/en/mcp>

- Bonus In Copilot Chat in VSCode

Open profiles

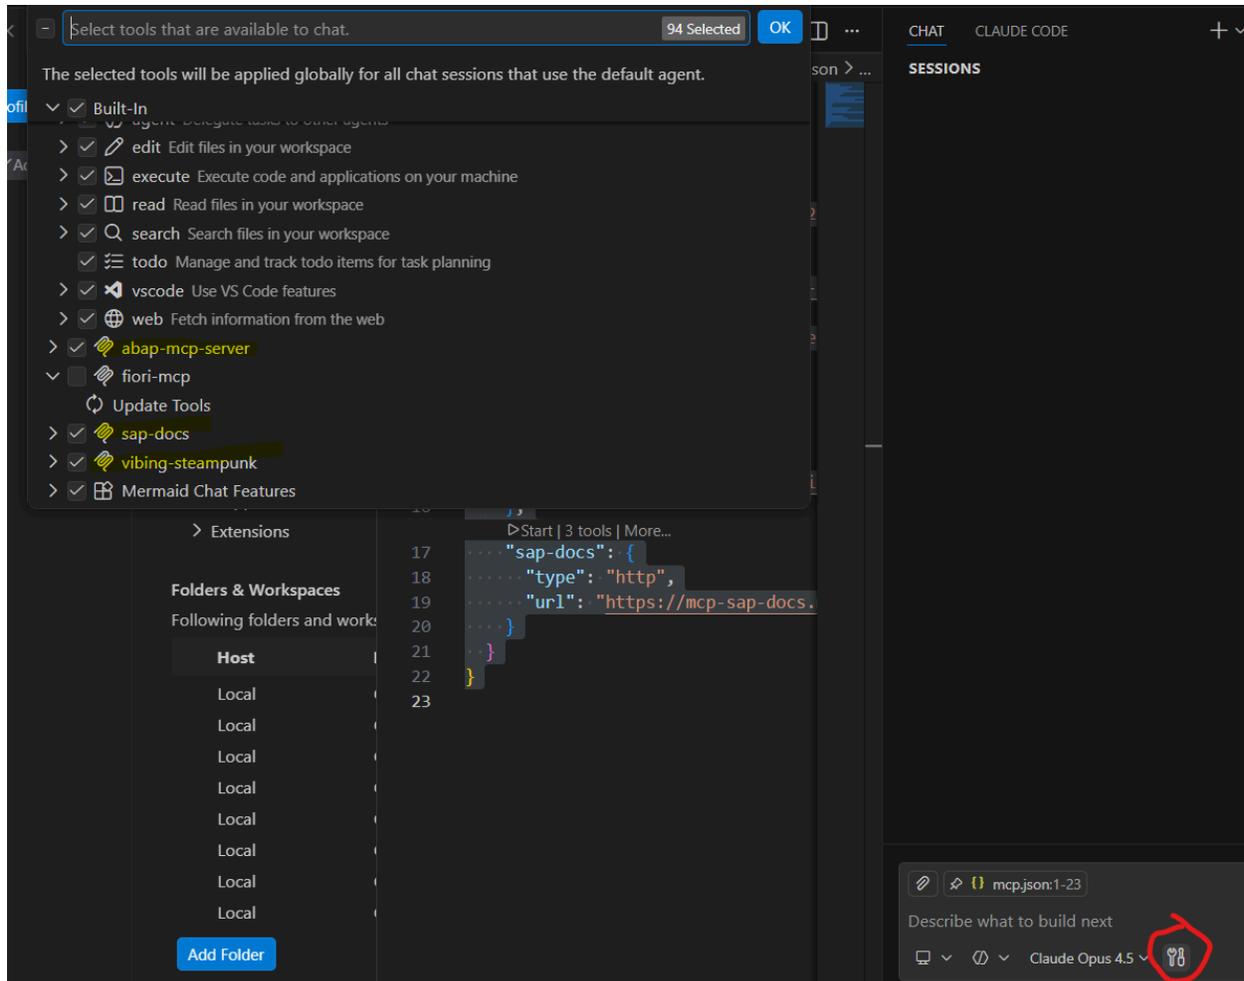

And add following configuration :

```
{
  "servers": {
    "vibing-steampunk": {
      "type": "stdio",
      "command": "{your_repo_path}\\vsp-windows-amd64.exe",
      "args": [],
      "env": {
        "SAP_URL": "{your_system_url}",
        "SAP_CLIENT": "{your_client}",
        "SAP_COOKIE_FILE": "{your_repo_path}\\cookies.txt"
      }
    },
    "abap-mcp-server": {
      "type": "http",
      "url": "https://mcp-abap.marianzeis.de/mcp"
    },
    "sap-docs": {
      "type": "http",
      "url": "https://mcp-sap-docs.marianzeis.de/mcp"
    }
  }
}
```

Now you can find MCPs

5. Demo

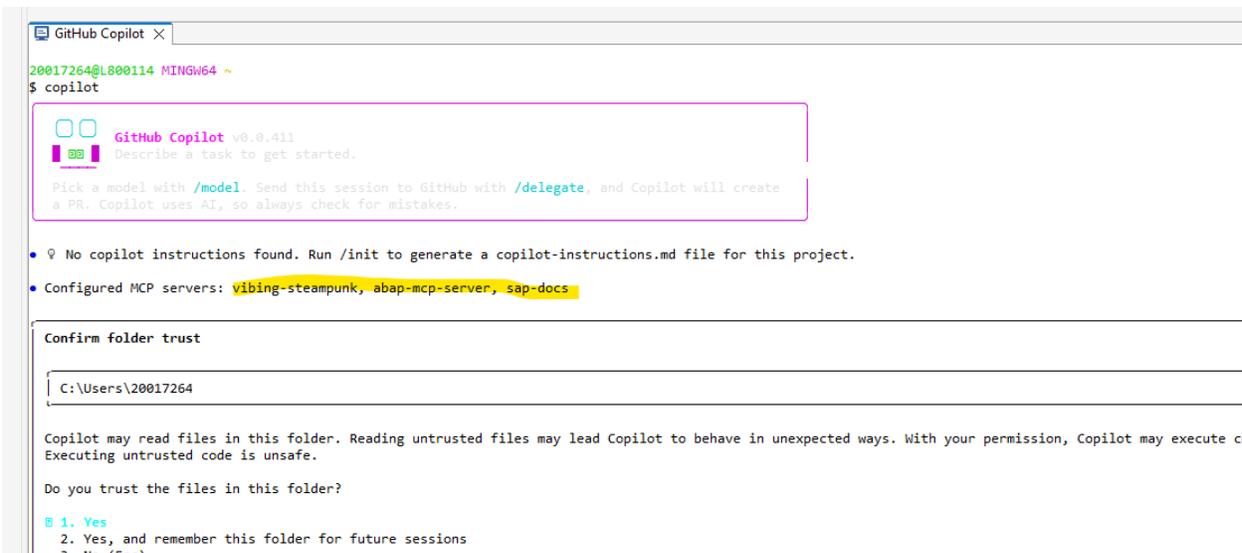

- Github Copilot CLI

In the terminal, launch command *copilot*

```
MINGW64/c/Users/20017264 >
20017264@L800114 MINGW64 ~
$ copilot
```

You'll see your configured MCPs

```
GitHub Copilot x
20017264@L800114 MINGW64 ~
$ copilot

GitHub Copilot v0.0.411
Describe a task to get started.

Pick a model with /model. Send this session to GitHub with /delegate, and Copilot will create a PR. Copilot uses AI, so always check for mistakes.

• No copilot instructions found. Run /init to generate a copilot-instructions.md file for this project.
• Configured MCP servers: vibing-steampunk, abap-mcp-server, sap-docs

Confirm folder trust

C:\Users\20017264

Copilot may read files in this folder. Reading untrusted files may lead Copilot to behave in unexpected ways. With your permission, Copilot may execute code. Executing untrusted code is unsafe.

Do you trust the files in this folder?

1. Yes
2. Yes, and remember this folder for future sessions
3. No (Esc)
```

Prompt your question or instruction (explain/create or something you want to do)

- READ

```
The user wants to create a new CDS view named ZCRT_TEST_CDS_COP instead. Let me create this new object.
• WriteSource: Test CDS - Product
  L ("success":true,"objectType":"DDL5","objectName":"ZCRT_TEST_CDS COP","objectU...
• ZCRT_TEST_CDS_COP créée et activée avec succès dans $TMP. Le warning est sans impact (héritage du search help non propagé depuis I_Product).
```

Then in ADT you can see the CDS :

The screenshot shows the SAP ADT interface. At the top, several tabs are open, including '[DS1] ZI_DOCK_APPOINTMENT' and '[DS1] ZCRT_TEST_CDS_COP'. The main editor displays the CDS view definition for 'ZCRT_TEST_CDS_COP':

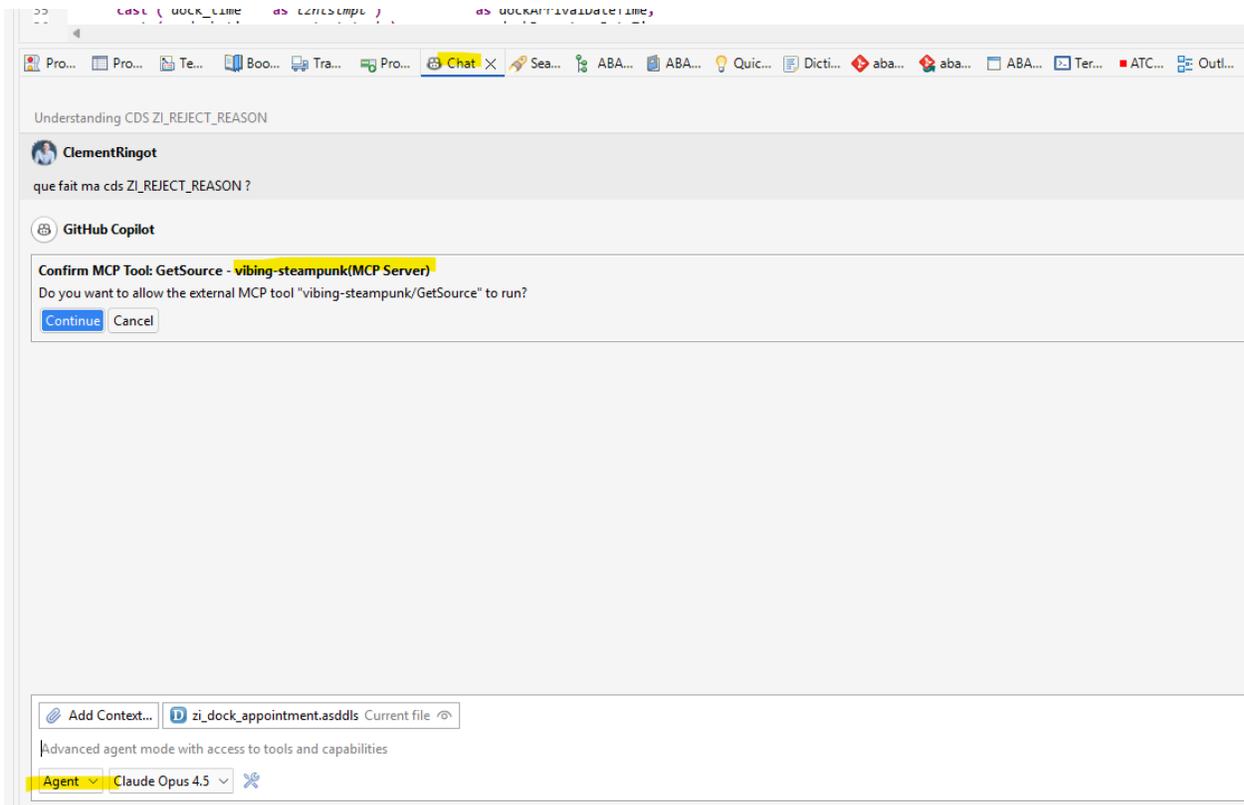

```
1 @AbapCatalog.viewEnhancementCategory: [#NONE]
2 @AccessControl.authorizationCheck: #NOT_REQUIRED
3 @EndUserText.label: 'Test CDS - Product'
4 define view entity ZCRT_TEST_CDS_COP as select from I_Product
5 {
6   key Product
7 }
8
```

Below the editor is the 'ABAP Type Hierarchy' pane, which is currently empty. At the bottom, a Copilot chat window is open with the title 'Expliquer CDS ZI_REJECT_REASON'. The chat contains the following text:

```
Let me try to update it with the correct content.
• WriteSource
  L {"success":false,"objectType":"DDL5","objectName":"ZTEST_CDS","objectUpl":"s...
  E The system is still returning the same error, even though my source has 'ZTEST_CDS' as the entity name. This is strange. The error says "Name of entity ZTEST_FLIGHT_CDS and DDL source ZTEST_
  be identical".
  It seems the existing source in the system still has 'ZTEST_FLIGHT_CDS'. Perhaps the system caches it or it's locked. Let me try using EditSource to replace the entire content, first locking
  Actually, let me try a different approach - use EditSource to replace the old entity name with the content I need. But first I need to lock it.
• LockObject
  E The user wants to create a new CDS view named ZCRT_TEST_CDS_COP instead. Let me create this new object.
• WriteSource: Test CDS - Product
  L ("success":true,"objectType":"DDL5","objectName":"ZCRT_TEST_CDS COP","objectU...
• ZCRT_TEST_CDS_COP créée et activée avec succès dans $TMP. Le warning est sans impact (héritage du search help non propagé depuis I_Product).
```

- In Github Copilot for Eclipse

Put you in Agent Mode & Prompt

- In Claude Code : Take a look here
